

System Capabilities

1. Quick search for agencies or vehicles by name, national ID, or region.
2. Displaying license details and attached documents for each agency.
3. Submitting new licensing applications electronically and tracking them step by step.
4. Managing user permissions (System Administrator – Safety Departments).
5. Tracking activities and logs for administrative review and auditing.
6. Supporting electronic attachments (e.g., document images, licenses, or commitments).
7. Future system development potential using AI algorithms to estimate the required number of agencies per region based on population density and consumption.

Gas Agency Licensing System

Gas Agency Licensing System

The system aims to record and document gas agency data and monitor the process of issuing and renewing licenses electronically, with the ability to conduct periodic inspection visits. It ensures fair coverage of gas services and accurate monitoring of agencies' operational performance with ease and precision.

System Features

1. Entering and updating data for gas agencies and vehicles.
2. Monitoring the license status of each agency (Active, Expired, Under Renewal, Suspended).
3. Electronically documenting all licensing procedures and approvals.
4. Tracking the licensing of all vehicles affiliated with each agency.
5. Facilitating access to agency details and operational records.
6. Monitoring agencies with expired licenses.
7. Displaying statistics of active and expired agencies.
8. Generating performance evaluation and activity review reports.
9. Printing licensing and detailed information reports.
10. Issuing official agency licenses.
11. User-friendly interface suitable for various user levels.
